

# Test Case: Add Third Product to Cart and Complete Purchase

## Preconditions:

1. User has access to the ecommerce website (<https://automationexercise.com>).
2. User is on the Home Page.
3. User can register a new account.
4. Browsers are set up for testing (Chromium, Firefox, WebKit, or Mobile).

## Test Steps:

1. Navigate to the Home Page.
2. Click on the "Products" link to go to the Products Page.
3. Locate and open the third product from the product list.
4. Set a random quantity (e.g., 1–5 units).
5. Click "Add to Cart."
6. Proceed to checkout from the modal or cart page.
7. Verify the "Register / Login to proceed" message appears.
8. Register a new user with valid credentials and personal information.
9. Verify that the "Account Created" message is displayed.
10. Go to the cart and proceed to checkout.
11. Place the order.
12. Logout from the account.

## Expected Results:

1. User navigates to the Products Page successfully.

2. The third product detail page loads correctly.
  3. Quantity input accepts the selected number.
  4. Product is successfully added to the cart.
  5. Checkout page prompts for registration or login.
  6. User registration completes successfully with a confirmation message.
  7. The order is placed successfully.
  8. User is logged out successfully.
